

## **CHIMINEA SAFETY TIPS**

### **The Methuen Fire Department would like to share some Chiminea Safety Tips:**

- Keep the fire small and manageable. Never use wet, damp, or "new" wood. This creates needless, irritating smoke. Always use dry, seasoned wood or specialist chiminea fuel (e.g. wood burning briquettes).
- If Methuen Fire Department receives complaints from neighbors that the smoke or smell is bothersome to them, we will investigate, and if deemed necessary, you may be instructed to extinguish, or allow it to burn out.
- The chiminea should be sited on a flat surface that is none combustible. It should not be placed directly onto a wooden surface.
- The surface that the chiminea is to be placed on should be flat and level. The chiminea should not wobble at all.
- If assembly is required, be sure to read the assembly instructions carefully and attach any fastenings securely. Follow manufacturer's specifications
- Do not leave the chiminea unattended. It gets very hot and could pose a hazard to both children and pets. Note - it is possible to buy a safety guard for a chiminea.
- Make sure that the chiminea is placed away from other materials that could burn or catch fire, both overhead and to the side, such as tree branches, sheds, awnings, clothes lines, fences and plants.
- Use long barbecue tongs to handle wood or food to lessen the risk of burning yourself. A pair of fire gloves would also be useful - the sides of cast iron barbecues in particular get very hot.
- Never use your chiminea indoors.
- It is advisable to keep a fire extinguisher handy, just in case.
- Never use an accelerant to light a chiminea. There have been cases of people burning themselves while trying to light a chiminea with a "small amount" of gasoline. The fire will "flash back" on the person and can cause severe burns.

**Please call the Methuen Fire Department for all questions/concerns regarding Chimineas at 978-983-8940. Call 911 for all Emergencies.**
